DESIGN AND PRODUCTION

LOUVRETTE offers both STANDARD and CUSTOM DESIGN solutions. Our customized product ranges are as variable as you are creative. We personalize the packaging to meet the exact specifications and requirements of your brand using state of the art pigment effects, surface finishes and decorations, resulting in unique and personalized looks.

LOUVRETTE provides an extensive and comfortable one-stop solution from the concept phase to the product launch. Our expert and experienced team carry out the design, product development, 3D technical drawings, rapid prototyping, tool making and in-house manufacturing which ensure transparency, efficiency and total confidentiality as well as saving you time and money.

PRODUCTS

Our product spectrum stands for different aspects – our ranges offer perfectly adapted designs of our jars, airless systems and bottles for facial and body care along with ranges of compacts and sticks for colour cosmetics.

Jars are available in sizes ranging from 5ml to 200ml. Depending on the individual customers' criteria, we use different materials such as biopolymers and Glass Polymer® along with Ecocert® approved materials.

The latest biopolymers which have been extensively tested are now ready to be used in customer projects. Jars and closures are available with glossy, matt or soft touch surface finishes.

Our highlight is our Regula Prestige airless jar which was developed in 2011 in close cooperation with MEGA Airless Dispensers and GAPLAST.

With its patented bag-in-bottle technology, it offers maximum product safety and ensures maximum attention at the POS.

Our high-quality airless dispensers, available in 15, 30 and 50ml, were developed in cooperation with MEGA Airless Dispensers. This cooperation enables a functional and harmonious design with an airless system that meets the highest demands. Because our customers may define different types of pre-assembly options according to their filling lines, an efficient filling process is assured.

150, 200, 250 and 400ml bottles are available in HDPE (glossy or satin-finish) or in co-extrusion with soft-touch surface. In addition we offer single or two-part screw closures, functional closures such as disc and flip tops as well as various lotion and spray pumps with high-class caps.

Compacts for decorative cosmetics are available in several classic designs which complement our care product lines. Our range includes compacts for mono and duo eye shadows, pressed and loose powder or blusher and our magnetic refill system patented in 2010.

QUALITY AND TECHNOLOGY

– MADE IN GERMANY

Our commitment to constant quality has been and remains one of the key factors to our success. High-tech injection moulding and downstream assembly and decoration facilities guarantee state-of-the-art in-house production that meets the DIN ISO 9001: 2008 quality management standards.

Our continuous investment in optimization and automation of our production processes means that today, more than ever before, we remain competitive and minimize our customers' costs.

THE MAXIMUM OF INNOVATION – 100% MADE IN GERMANY

Louvette, Gaplast and MegaPlast – three renowned cosmetic packaging specialists have bundled their expertise creating an innovative airless system:

- Maximum safe packaging for your formulations – AirlessMotion® with up to three barrier layers
- Maximum range of application – suits numerous viscosities and formulations
- Maximum variety of decoration and finishing options – real eye-catcher at POS
- Maximum efficient filling (top fill) – easy fast and safe
- Maximum restitution rate – up to 98%, even with up side down usage

Maximum within, as well – with bag-in-bottle = Airless Motion® Technology:

The solid outer bottle features a flexible inner bag and an external pump preventing air entering within.

Maximum simplicity: The consumer uses it intuitively – presses the pump. Result = Volume - Air compensation – due to two small holes at the bottom of the bottle.

Maximum efficiency: The inner bag is fixed at the top and bottom. This ensures controlled collapsing – from outside in every time you actuate.
