BIOTILYS® Skin Barrier improvement

BIOTILYS® a NOVEL GREEN TECHNOLOGY ingredient, is obtained by an optimized fermentation process of *Lactobacillus pentosus*. BIOTILYS® has been developed to maintain and improve the **SKIN BARRIER HOMEOSTASIS** as this is the basic condition for healthy skin.

For the following *in vivo* tests, the measurement of the TEWL, as a well-known indicator of the skin barrier homeostasis, has been used. The increase of TEWL reflects an impaired skin barrier, whereas a decrease, demonstrates a protected and/or a skin barrier recovery.

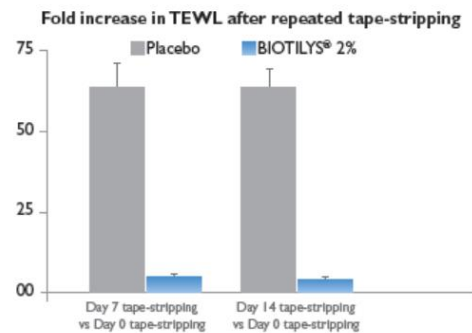

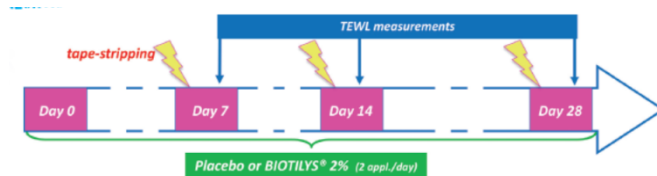

1. BIOTILYS® FOR AN IMMEDIATE, OPTIMAL AND LONG-TERM PROTECTION

After a single application at 2%, BIOTILYS® brings an efficient protection that limits and prevents skin barrier defects.

2. BIOTILYS® FOR A PROMPT RECOVERY OF THE BARRIER AND EARLY RETURN TO A HEALTHY SKIN

BIOTILYS® keeps maintaining and protecting the skin barrier regardless of repeated and cumulative external aggressions.

3. BIOTILYS® IMPROVES SKIN HYDRATION, MATIFIES SHINE AND ILLUMINATES THE SKIN

After a single application, BIOTILYS® improves the

- skin hydration by 2 times compared to the placebo. This improvement reaches 6,7 times, after a week of usage.
- The radiance is increased by almost all volunteers.
