

BergaMuls ET 1

A vegetable fibre compound for emulsifying and thickening

A century ago, the first emulsifier revolutionised cosmetics. Since then, a lot has happened in cosmetics. Ongoing innovation around this elementary ingredient category has multiplied manufacturers' options.

In addition to a host of physical and chemical properties, modern emulsifiers must also meet other demands, like biodegradability, natural origin and environment-friendly manufacture and ideally not to be declared as emulsifier.

In view of all these requirements, the Berg + Schmidt R & D team has now developed a vegetable, multi-functional solution – a product based on vegetable fibres that simultaneously emulsifies and thickens same time, is easy to process, and is all-natural.

BergaMuls ET 1 advantages

- **Natural, renewable raw material**
- **Can be used in cold process (saves time and costs)**
- **Environmentally friendly**
- **Electrolyte-compatible**
- **Compatible with all oil polarities**
- **Can be used across the 4-9 pH spectrum**
- **High resistance to shear forces and temperature**

Applications

Facial care
Body care
Hair care
Sun care
Decorative cosmetics

BergaMuls ET 1: A vegetable fibre compound for emulsifying and thickening

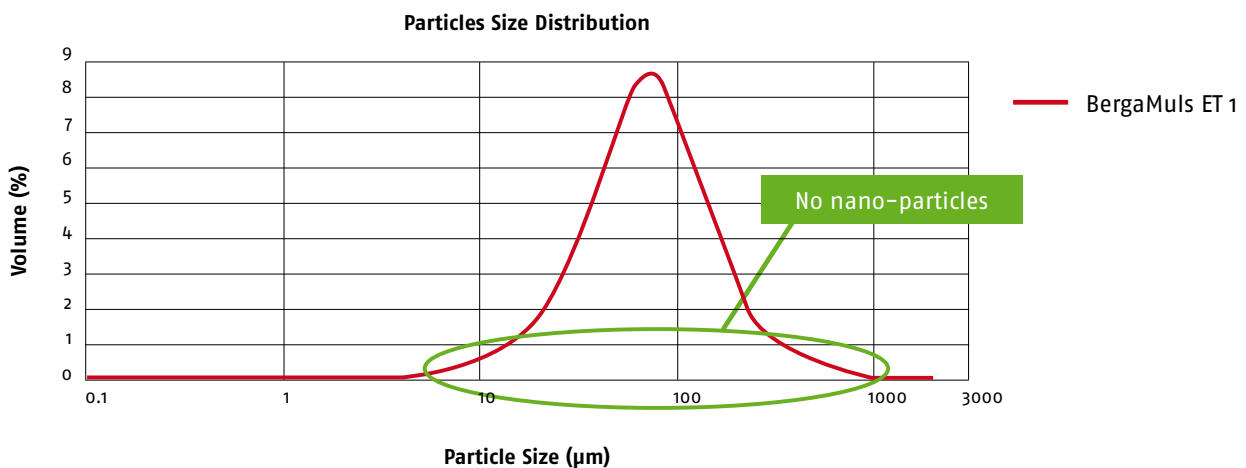

The product

BergaMuls ET 1 is based on natural fruit and cereal fibres, and has excellent emulsifying and thickening properties.

For consumers, fibres of this type have positive associations with health and well-being, supporting the concept of the naturalness of your products.

Trade name:	BergaMuls ET 1
Chem. description:	Fruit and cereal fibres
INCI:	Beta-Glucan (and) Pectin
Appearance:	Fine white powder
Particle size:	≥ 1 µm
Preservative agent:	Preservative-free

Simple and multifunctional

A special benefit of BergaMuls ET 1 is that it can be processed warm or cold, and emulsifies and thickens in just one work step. BergaMuls ET 1 is thus a multifunctional solution.

Another advantage is its compatibility with other ingredients used in cosmetics, such as vegetable oils, silicone oils, esters, electrolytes, UV filters and others.

Viscosity of emulsions with various amounts of BergaMuls ET 1 (20% oil, percentage of BergaMuls ET 1, to 100% with distilled water). Brookfield measurement.

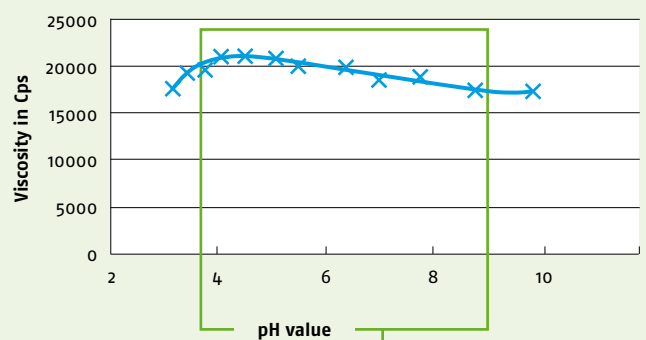

- BergaBest MCT Oil 60/40 (Caprylic Capric Triglyceride)
- Sunflower Oil ▲ Paraffin Oil ● Dimethicone
- BergaCare EM-16 (Isopropyl Palmitate)

In addition, BergaMuls ET 1 can be used in the pH spectrum from 4–9, so that it covers the common cosmetics pH range.

(20% BergaBest MCT oil 60/40, 4% BergaMuls ET 1, to 100% with distilled water, pH values obtained by adding NaOH or citric acid). Brookfield measurement.

can be used in the common cosmetics pH range

Uncomplicated processing

BergaMuls ET 1 is easy to use. A fine, white, virtually odourless powder, it dissolves in the water phase just as well as it disperses in the fat phase. BergaMuls ET 1 requires no additional working steps such as subsequent neutralisation or preparation of a preliminary solution.

With its energy-saving processing and the very low amounts needed, BergaMuls ET 1 offers economic and ecological advantages over conventional emulsifiers.

It is very resistant to high shear forces, as commonly occur in homogenising.

To get the ideal droplet size and achieve a stable emulsion, Berg + Schmidt recommends the following procedure:

Fig. 4: Recommended procedure for using BergaMuls ET 1

Usage levels

BergaMuls ET 1 unfolds its full benefits even at low quantities. 1.5–5% is generally enough for a stable emulsion. No co-emulsifier is needed.

We will be pleased to support you in new developments. Formulations are available on request.
