

MEETING THE SUPPLIERS

Events | This preview selection for this year's Cosmetic Business, with about 400 exhibitors from June 8–9 in Munich, shows some exciting novelties.

Albéa's **Cat's Eyes** is a mascara range for a wide-eyed look, enabling agility in application thanks to its extra slim fibre brushes. The extra slim design for all types of lashes is user-friendly and is even suited for small, straight and stiff lashes. The new range features two new brushes: **Panther Brush** is an extra thin curved brush with short fibres, delivering a perfect combination of coating and curling performance. **Lynx Brush** is an extra slim brush with short fibres providing immediate access to the formula: in one stroke, the brush coats the lashes from root to tip.

Baralan's new **Flock Applicator 18** has been developed with a curved shape and rounded tip to allow for better product application. This applicator can be matched to the new

wiper 18 which will guarantee the proper dosage of product. This applicator is suitable for an application of foundation and concealers.

Gerresheimer's new **Marble Decoration** is a marble-effect surface finish. It is produced by floating selected colours onto water and dipping the bottle in. Due to the individual patterns thus created, each product has its own unique appeal. The production process can be varied, by setting specific dipping speeds for instance, to create different visual effects. However, even though the finish on each bottle in a product group is slightly different, they all have a recognisable design. This surface finish is possible on transparent or colour-lacquered glass.

InduPlast's new big ball Roll-on line, available in a smooth or matt finished version, is an eco-friendly packaging made from 100% PP/PE recyclable material.

Prestige Pouch is **Inotech Kunststofftechnik's** new version of their **Prestige** airless dispenser system. This system replaces the piston pump with bellows and is particularly suitable for low-viscosity media. Because of its barrier properties, the bellows contributes significantly to the protection of the product.

Compared to the piston pump, the system offers reliable protection against leakage and provides new visual accents. It is available as a top-filled version.

KHK's formula for **Planty** is the company's standard for lip-care sticks. Oils and waxes of natural origin, such as beeswax and shea butter, together with vitamin E, protect the lips. The formula has now been developed into a colourless lip-care product without vanilla scent especially for men. An extract of hops softens raw male lips. If desired, the formula can also be NaTrue-certified and supplied as a vegan product.

Lageen's new decoration technology for plastic tubes, **MetallicPlast**, involves realistic high resolution photo imaging. It provides many options of metallic effects printed to the shoulder and can include tactile effects and diverse textures. It can be directly printed on supple LDPE, MDPE or CoExTubes. The company's new fully recyclable **Sugarcane PE-based Tubes** are produced from PE resin, a renewable

raw material with low carbon footprint emission.

use of mineral oil-based plastic can be reduced by more than half. Because of the high proportion of chalk, its warm texture is soft to the touch. The texture is comparable to that of paper; however, the stiffness remains similar to that of traditional tube materials. Because of the natural "filler" content, the tube can be made significantly thinner than traditional tubes.

The inner bottle of **Polpak's Airless GR213A**, a new functional and luxurious packaging, can be coloured with the help of a spraying technique. Its double thick wall and square shape leave plenty of possibilities for decoration. Another advantage of the product is a built-up nozzle without cap.

Rebhan's Boston Luxe is an elegant and classic line in bottles made from unbreakable glass polymer. The new bottle is available with an extensive selection of sealing caps, like other glass polymer bottles. Further extensions of the company's standard bottle range include **Edge** and **Quattro**.

Rusi's Bubble Tip Eyeliner features an elegant shape with an unusual applicator. The easy-to-handle bubble tip allows a precise and fine lid line in just one application. The open pores of this applicator absorb the colour pigments well and give them off in the perfect amount.

Sederma's Citystem, a new active from **HTN technology**, is derived from *Marrubium vulgare* plant cells and shows visible anti-pollution effects in vitro and in vivo. This ingredient will be presented at the **Spotlight area**, a special display highlighting selected new developments from the exhibitors.

SHB's new TC Adapter for angle-necked HDPE and PET bottles makes it easier to manufacture and fill bottles with angled necks. As well as facilitating the straightforward manufacture of bottles using conventional blow-moulding machines, it also facilitates filling them in a vertical position on traditional filling equipment. The combination of adapter and child-proof cap sim-

ply pushes on vertically like a normal cap.

The mirrored high gloss look of the body of the new **Airless Tube de Luxe** of **Tu-Plast** complements the luxurious Airless pump **Evolux** or **Evoclastic** from **Aptar**. With the **Polyfoil** barrier, products are also shielded from air, sun, moisture or chemicals. The Polyfoil tube is now available in high gloss. **Neopac** developed a special laminate for this, comprising several layers bonded together.

www.tuplast.hu

A lower profile and a maximum weight reduction distinguish the closures of the **Weener's Next Generation** line from the market average. A further extension is the **Screw-on** line which has the same advantages, but with a screw-on instead of snap-on application. Another new introduction is the **Advanced** line, which can be fitted with **Pure Dispense** – a membrane that offers the consumer a more controlled dispense without limiting product consumption.
